

DYMA ESG EVO

MEASURE. DISCLOSE. LEAD.

The automated hub for your ESG, carbon & climate-risk journey.

DYMA ESG EVO unifies the entire ESG lifecycle — data collection, assessment, GHG carbon accounting, financed emissions and regulator-ready disclosure — in one governed, auditable system, replacing fragmented spreadsheets with an automated framework that turns ESG into a managed, strategic discipline.

The challenges it solves

- **Fragmented ESG data.** Numbers scattered across spreadsheets, teams and email — no single source of truth and version-control chaos every reporting cycle.
- **Manual, unauditable carbon accounting.** Scope 1/2/3 in ad-hoc spreadsheets with inconsistent factors and no evidence trail — making assurance slow and risky.
- **Financed emissions are hard to compute.** Banks must attribute portfolio emissions across hundreds of counterparties (EVIC, attribution, PCAF scoring) — impractical by hand.
- **A rising regulatory & disclosure burden.** Bursa Malaysia, BNM climate expectations, IFRS S1/S2, TCFD and GRI each demand structured, evidenced disclosures.
- **ESG as a compliance checkbox.** Without targets, trends and action tracking, performance can't be managed or a credible net-zero pathway demonstrated.
- **Siloed teams.** Sustainability, risk, finance and the business work from different numbers, with no shared, governed record.

Three pillars — E, S & G

E

Environmental

GHG Scope 1/2/3 · carbon ledger & inventory · financed emissions (PCAF) · emission factors · energy, fleet & buildings

S

Social

Workforce & safety metrics · ethics & training · community impact · human-capital disclosures

G

Governance

Board independence · policies & controls · ESG assessments · role-based access & full audit trail

Core capabilities

ESG Data Collection

Collect ESG metrics by E/S/G category — each with value and unit (e.g. water 22.3 m³, waste 12 t), required flags, source and notes, signed off with a verified status and date.

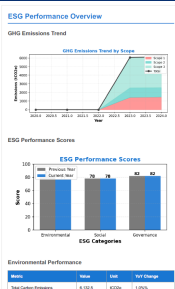

ESG Assessment

Structured questionnaires by pillar: required and optional questions, per-question guidance and Yes/No responses backed by justification notes, with live completion progress.

Assessment Review & Scoring

Auto-scores each pillar (E, S, G) and a weighted overall score, with review-and-approval sign-off and a one-click professional PDF report — summary, analysis, evidence, recommendations.

ESG Performance Reports

Multi-year GHG emissions trend by Scope 1/2/3, year-on-year ESG scores by pillar and metrics with YoY change — plus framework-aligned disclosure with GRI content index.

Carbon Emission Ledger

A double-entry ledger of every emission, offset and renewable-energy certificate by scope — debit/credit in tCO₂e, verification status and financial cost, across organisations.

Carbon Ledger Statement

A GHG-Protocol statement — opening balance, emissions (debits), offsets/RECs (credits), closing balance and net carbon position — consolidated across the group with per-entry verification.

The path to impact

Why choose DYMA ESG EVO

Single source of ESG truth

Enter once, reuse across every disclosure — no rekeying or reconciliation.

Assurance-ready by design

Every figure carries source, factor and evidence with a full audit trail.

Meet regulator & investor expectations

PCAF financed emissions and TCFD/GRI-aligned disclosures help meet BNM and Bursa expectations and investor demands.

From compliance to strategy

Targets, action plans and trend monitoring create a visible net-zero pathway.

Faster reporting, lower risk

Automated assembly and consistent methodology cut cycles from months to weeks.

Better capital decisions

Portfolio and sector emission intensity inform green and transition financing.

Efficiency & control

Workflows, reminders and role-based access reduce effort and strengthen governance.

Real-world applications

- **Annual sustainability report.** Assemble a GRI/TCFD-aligned report from live data in weeks, not months.
- **Financed-emissions baseline & net-zero target.** Compute portfolio financed emissions (PCAF), set a target and report progress.
- **Climate-risk & regulatory disclosure.** TCFD-aligned disclosures and sector emission-intensity for BNM expectations.
- **Operational carbon management.** Track Scope 1/2/3 across branches, data centres and fleet against reduction targets.
- **Counterparty & investee ESG assessment.** Assess portfolio companies' maturity and collect emissions data.
- **External assurance.** Give auditors a complete evidence and calculation trail.
- **Green & transition financing.** Use emission-intensity insight to steer lending and spot transition opportunities.
